

ARMORGlass

Screen protectors installation tips Regular fit

For a complete installation tutorial, please watch the video we made for you
([Click here](#))

Starts the installation from the top of the device
using the selfie camera as a reference point

Once it is properly align, press
on it starting from the top center
and move your finger across the
screen to the bottom of it. If
bubbles appears, don't panic it's
normal. Just use a card and
push them to the edges

In order to properly align the
screen protector, install it while
the screen is On and on a bright
wallpaper/ page.
You will then be able to use the
screen bezel as a reference
point

If the alignment is not perfect,
you can always pull up the
screen protectors from the side
and adjust it accordingly. Just
make sure to not touch the glue

Use all the tools included with
the screen protector, especially
the blue adhesive film:
Removing all the dust will result
on a clear installation
with no permanent bubbles.

Put the device on charge since it will warmed up
which can ease the installation

Starts the installation from the top of the device
using the selfie camera as a reference point

If the alignment is not perfect,
you can always pull up the
screen protectors from the side
and adjust it accordingly. Just
make sure to not touch the glue

Use all the tools included with
the screen protector, especially
the blue adhesive film:
Removing all the dust will result
on a clear installation
with no permanent bubbles.

In order to properly align the
screen protector, install it while
the screen is On and on a bright
wallpaper/ page .
You will then be able to use the
screen bezel as a reference
point

With a under-display fingerprint
reader, the most important thing
is to make sure there is no
bubbles remaining.
Use a card to push all the
bubbles to the edges.

Once it's properly aligned, press
on the bezel to install it since it's
where the glue seats.

Put the device on charge since it
will warmed up which can ease
the installation
